12/30

using the same eyebrow
to nose length, the
face continuously
looks longer

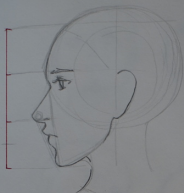

to be continued perspective changes
the lengths

12/30

From Diffin's Champagne -
sinky, soft (extra), eye ✓

Taleggio - SUPER SINKY

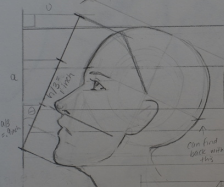

Want to find
height of eye from
line circle "e"

$$\sin \theta = \frac{e}{d}$$

$$e = d \sin \theta$$

full head circle
diameter

can find
back with
this

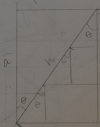

0.8
inch

0.9
inch

1.15
inch

$$\cos \theta = \frac{a}{h}$$

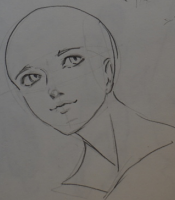

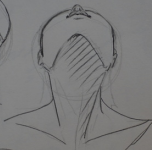

$$a = h \cos \theta$$

θ is equal
for all h/3
sections

I must
have missed
up for these
not to be
equal

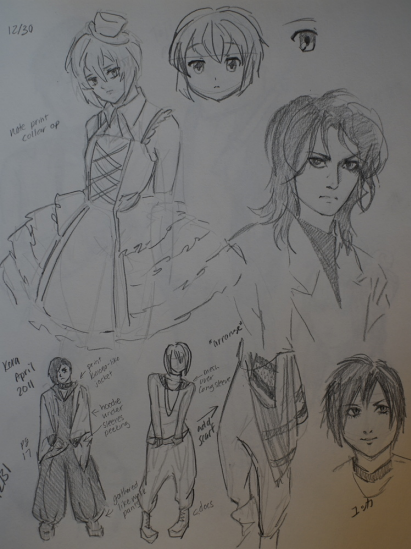

as θ increases (head back), increases, $h/3$ decreases
